MEMORANDUM FOR: Director of Materiel

9 July 1956

THROUGH : Deputy Project Director

SUBJECT : Film Handling

25X1A

25X1A

25X1A 1. In a conversation with [REDACTED] and myself, [REDACTED] suggested that we look into the possibility of obtaining some standard reefers for film storage at Adana and [REDACTED]. As I understand it, these items are fairly readily available, they have the advantage of being portable and they provide excellent environmental control. I also understand that they would normally be placed out-of-doors and would, therefore, eliminate the necessity of having air conditioned space in a building for film storage.

25X1A

2. Another matter [REDACTED] mentioned is the importance of prompt communication from Rochester to the Detachments in the field to give them the benefit of technical evaluations of the quality of the photography. I assume this is entirely feasible with present communications arrangements.

3. A third matter which was raised by [REDACTED] and again by Herb Miller after his last trip, is that of the distribution of exposed film from the Detachments to Rochester. There have been many suggestions floating around on this matter and I believe at an early opportunity we should try to arrive at a firm plan.
